NO DATA CENTER IN SALEM

protect our natural resources, our water, our air, our land, our sanity

WHAT IS IT?

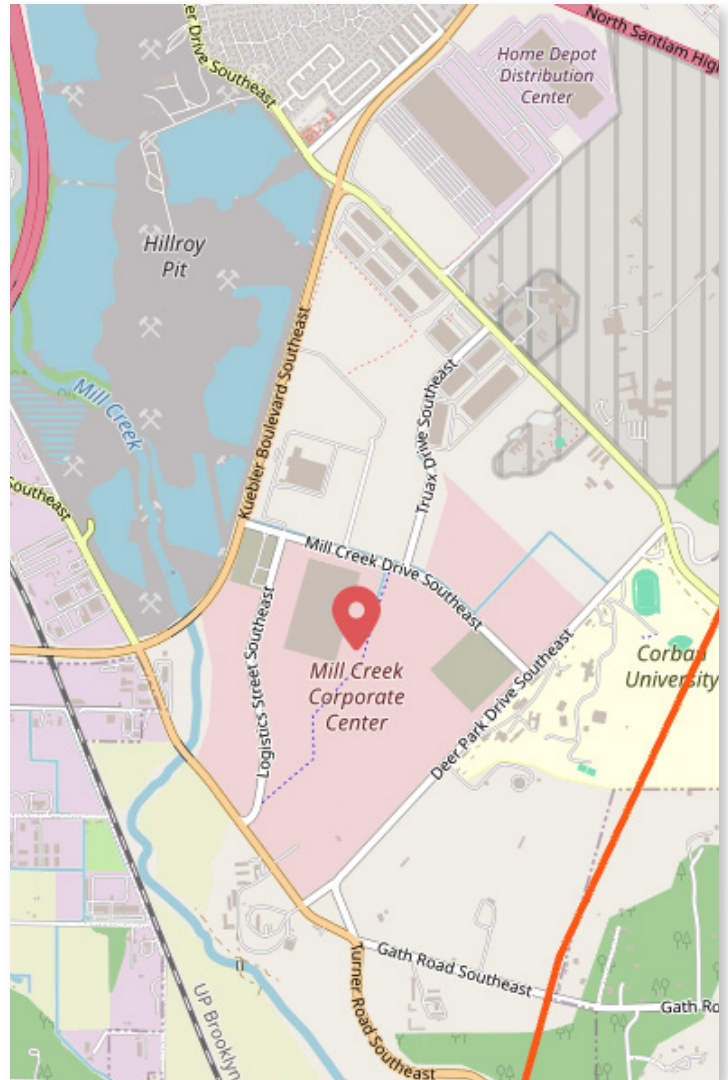

Oakline at Mill Creek is a hyperscale data center proposed by Alphabet-backed Verrus for the Mill Creek Corporate Center in southeast Salem. As initially proposed, the campus would total 654,000 square feet and a utility substation designed to support cloud computing, artificial intelligence, and enterprise services, on 3 parcels. AI data centers can raise utility costs, contaminate water, produce constant noise, and are linked to poor health outcomes.

WHAT CAN WE DO?

Stay informed, spread the word, take action, wave a sign.
